KTC Software Audit Package

» Do you know all components and associated licenses of your product? «

Does your software product contain any security, license, operational or quality risks? Are there any hidden security vulnerabilities in the Open Source libraries it uses? What technical debt or legacy code is hidden in the software product?

Our Audit Report includes:

- BOM - Bill of Material and licenses of all used Open Source libraries
- Analysis of Security Risk (CVE - Common Vulnerabilities and Exposures, NVD - National Vulnerability Database)
- Analysis of Compliance Risk (e.g. license issues)
- Analysis of Operational Risk (e.g. outdated libraries)
- Reliability Rating (what common bugs are included in your software product)
- Security Rating (e.g. OWASP)
- Code Maintainability Rating (e.g code complexity and duplications)
- Test Coverage (currently only for Java and JavaScript)
- Technical Debt (in developer time respectively EUR)

Get an audit of your software product using best in class technologies like Black Duck® Hub scanning and SonarQube.

We analyze all common programming languages - including C, C++, C#, Java, JavaScript, PHP, Python.

You get a complete audit report, which accesses potential risks for you and your customers.

Depending on your requirements, you choose the right flat-price package.
